KEEP YOUR DATA PROTECTED WITH THIS FIRST RATE ENCRYPTED FLASH DRIVE

FROM £59
FROM \$N/A

www.istorage-uk.com

OPERATING SYSTEM:

- PC, MAC, LINUX

SPECIFICATIONS:

- 8GB USB DRIVE
- AES 256-BIT HARDWARE ENCRYPTION

If you're looking to add an extra element of security to your important files and folders, then this encrypted drive from Datashur could be an inexpensive yet incredibly worthwhile solution. Equipped with a pin lock and AES 256-bit hardware encryption used by the military, it promises to make sure that your information will remain protected at all times.

Setup and usage is simple no matter which computer operating system you use. Just enter the default PIN upon purchase, reset a new one using alpha numeric buttons with simple letter to number transposing as with old mobile phones, and you're ready to go.

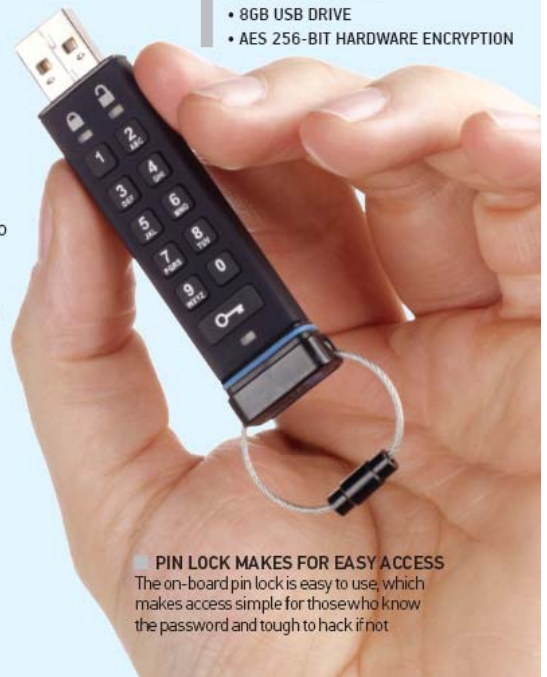

Our test version was the 8GB model and while this isn't enough to protect a whole studio's worth of information, it could easily cater for sensitive

client information or a latest top secret design project. The price isn't prohibitive either, meaning that you could use a couple of these to backup and archive important information knowing that even if they fell into the wrong hands its unlikely that anyone would be able to remove anything from them.

A great product that is ruggedly made, easy to use and delivers on its primary goal of protecting your data. Well worth a look if you have sensitive project details you need kept under lock and key. ■

VERDICT: 8/10

Great value for a drive that is able to deliver stunning peace of mind

PIN LOCK MAKES FOR EASY ACCESS

The on-board pin lock is easy to use, which makes access simple for those who know the password and tough to hack if not
